

## Scaffold Safety for Construction: Fall Protection Equipment

### Demonstration

#### Fall Protection Equipment

**Objectives:** Part of the regulation's training requirements are to familiarize employees with how to erect, maintain, and disassemble fall protection equipment. Assemble samples of the fall protection equipment that the trainees will be expected to use. Demonstrate how your personal fall arrest system equipment is to be worn, adjusted, anchored, and used. Describe how the equipment protects the user in case of a fall. Display samples of guardrail systems and describe how they are installed to ensure they will withstand the forces needed to ensure fall protection. Allow the trainees enough time for first-hand inspection of the equipment.

**Works well with:** Groups of about 8 to 12 employees.

**Materials required:** Personal fall arrest system equipment and/or materials used in guardrail systems.

**Preparation time:** About an hour to assemble the equipment.
